3 Work experience

1. Research projects

- AMiCA (Automatic Monitoring for Cyberspace Applications) IWT-SBO project. The goal of the AMiCA project (2013–2017) was to mine relevant website resources (blogs, chats and social networks), and collect, analyse, and integrate large amounts of subjective information using text and image analysis with the objective of tracing harmful content in an automatic way. I was actively involved in the project, and particularly in the use case on cyberbullying. My main tasks involved collecting relevant data to train a machine learning classifier and developing a prototype system for automatic cyberbullying detection.

2. Teaching:
